

Bulk Download Instructions for using Python Script Supplied in Vertex *Implemented in Vertex, <https://vertex.daac.asf.alaska.edu/>*

Note: See Appendix for instructions on installing Python

Purpose:

This script allows users to download multiple data products from Vertex regardless of the browser they use, by running a script pre-loaded with the data they have put in the Vertex Download Queue.

Requirements for use:

- Earthdata login credentials
- Mac, Windows, or Linux
- Python installed
 - Python comes with Mac OS X
 - To upgrade to the most current version
 - <https://www.python.org/downloads/>
 - See installation tips below
 - Windows users will have to download and install it.
 - <https://www.python.org/downloads/windows/>
 - See installation tips below

Steps

1. *Get the script*

Once you have items you want to download in your download queue, click the <**Download Python Script(.py)**> button.

Download queue (3 items, 10.07 GB)

Bulk download options

Download products with Firefox and DownThemAll or run the script for instant downloads (easy).
[Step-by-step Directions](#)

Download Python Script (.py) Bulk Download (.metalink) Download Metadata (.csv) Google Earth (.kmf) Dismiss

download-all-2016-...py asf-datapool-result...csv ASF_2016121...metalink Show all

Chrome users will have to click the **<Keep>** button found at the bottom of the browser window when prompted.

2. Run the script

- a. Open a Terminal window (Mac) or a Command window (Windows).

For Windows 7

- Click the Start Menu button in the bottom left corner of the screen

- Type `cmd` in the "Search programs and files" box and <Enter>

- Command line window and prompt

For Windows 10

- Click on the Start menu button (Windows icon in the Task Bar) and type `cmd`

For Mac OS X

- Click on the Finder icon in the toolbar
 - Highlight “Applications” in the Favorites list
 - Type Terminal in the Search box
 - Double-click to open
- b. Navigate to the directory the script downloaded to (usually your Downloads directory or folder) using the “change directory” (cd) command. More information on using this command can be viewed [HERE](#).

- c. At the prompt, type the following command and <Enter>:

python name of the file you downloaded from Vertex

For example, python download-all-2016-12-15_11-16-27.py

- d. You will be prompted for your Earthdata login credentials unless you are already logged in to Vertex.
- e. Download will begin.

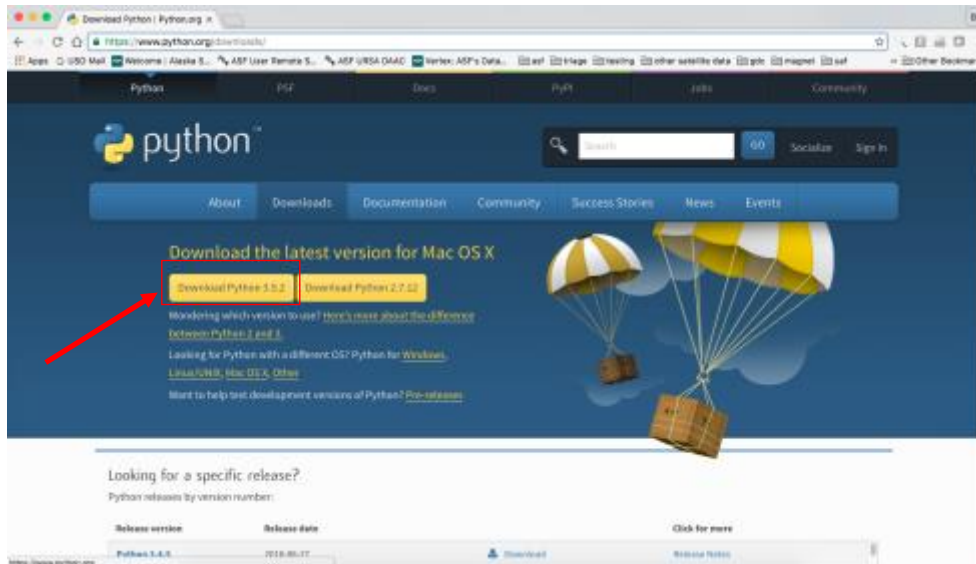

Note: Files will be downloaded into the directory where you run the script.

Appendix

Instructions for Installing Python

Installing Python for Mac OS X

1. Go to <https://www.python.org/downloads/> and click on the <Download Python 3.5.2> button

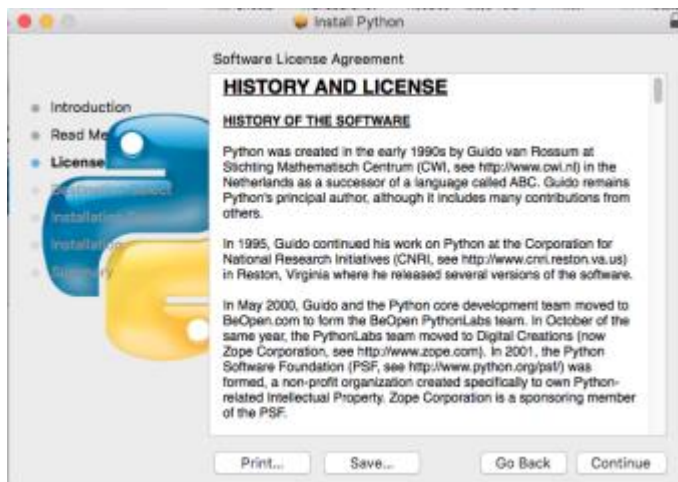

2. Open the downloaded file (*.pkg)
3. The Python Installer window opens. Click <Continue>

4. Click <Continue>

5. Click <Continue>

6. Click <Agree> to agree to the license agreement

7. Click <Continue>

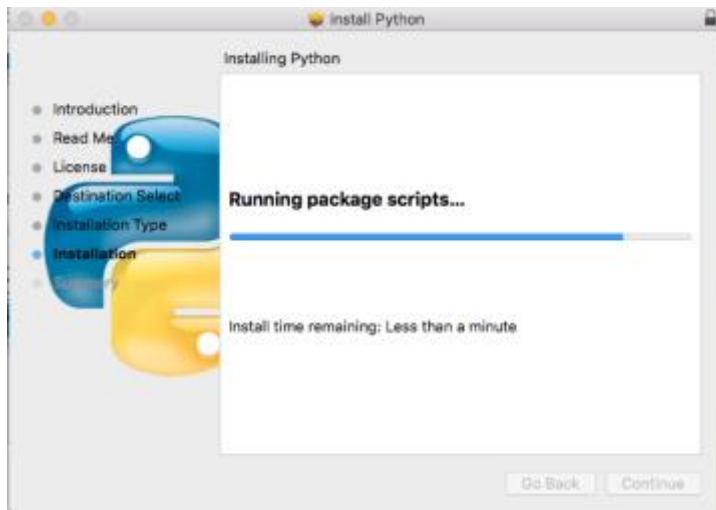

8. Click <Install>

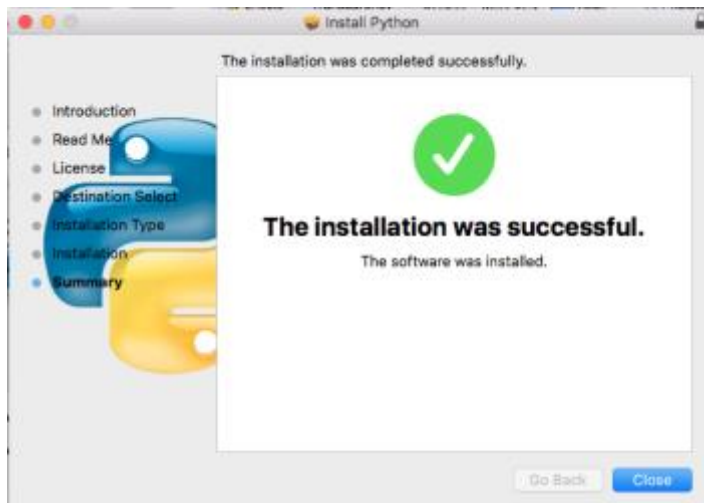

9. If prompted, enter your *username* and *password* to allow the installation to proceed

10. Installation begins

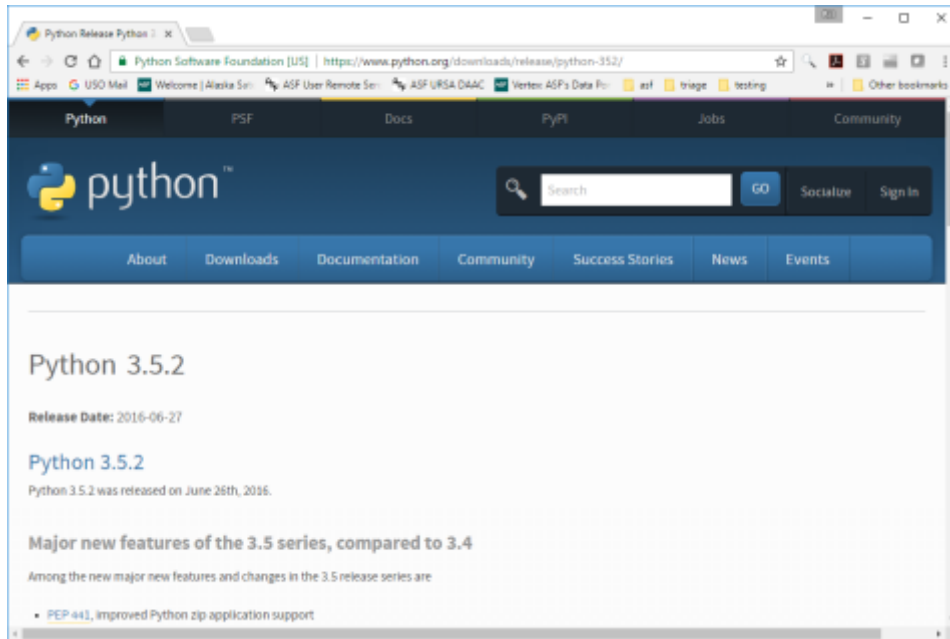

11. Installation is complete

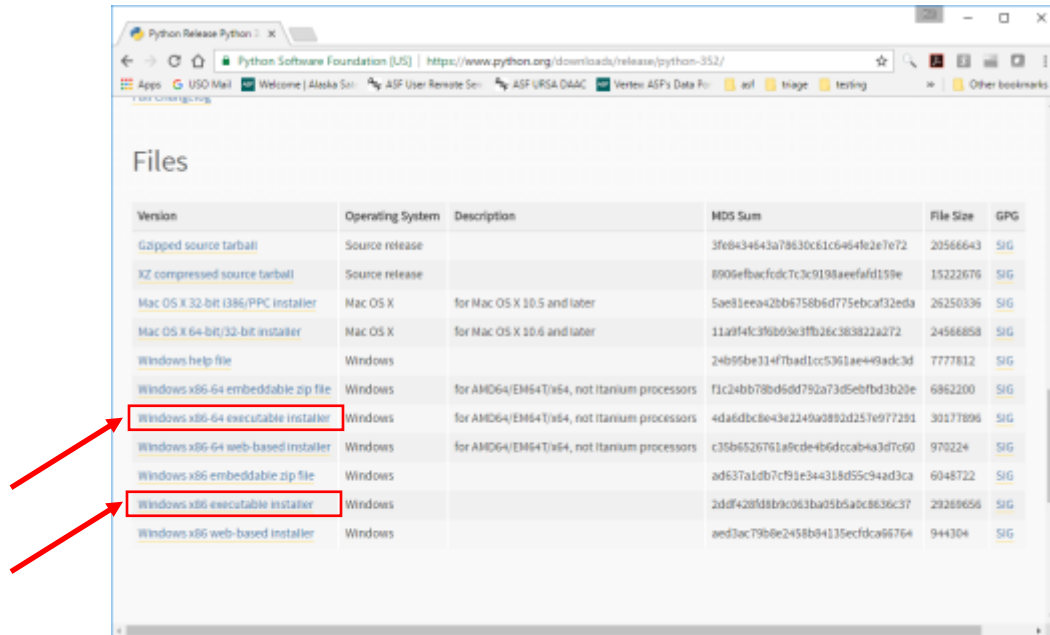

Installing Python for Windows

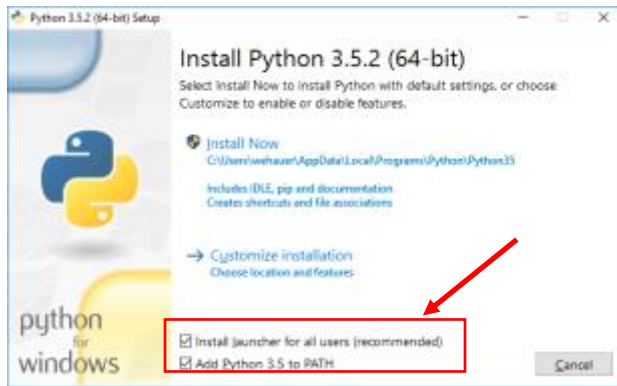

1. Go to <https://www.python.org/downloads/release/python-352/>

2. Download the appropriate Windows executable installer file
 - a. **Windows x86-64** for a 64-bit operating system
 - b. **Windows x86** for a 32-bit operating system

3. Open the downloaded file
4. In the **Install Python 2.5.2** window, make sure the *“Install launcher for all users”* and *“Add Python 3.5 to PATH”* boxes are checked. Click on **“Install Now”**

5. If prompted, allow changes to be made to the computer
6. Installation begins

7. Installation is complete
