

MEaSURES gridded sea ice products

Product format specification

ASF Satellite Facility

ABSTRACT

This product format specification defines the MEaSURES gridded sea ice products generated at the Alaska Satellite Facility. It contains the definition for the ISO compliant XML metadata.

Document Preparation

The document was prepared with contributions from
Rudi Gens

Document Change Log

1 Document structure

The document is structured as follows:

Chapter 1 introduces the structure and scope of the document.

Chapter 2 summarizes the product packaging.

Chapter 3 defines the elements of the ISO compliant XML metadata.

2 Product packaging

The naming convention for the gridded sea ice products follows as base name of this pattern:
PnpppSYYDDDddd.TF (e.g. R1001a06337181.DP)

| Component | Definition | Example |
|-----------|--|---------|
| Pn | platform and number ("R1", "E1", "E2") | R1 |
| ppp | product ID | 1 |
| S | data stream ID (a-z, A-Z) | a |
| YY | start year of the product | [20]06 |
| DDD | start Julian day of the product | 337 |
| ddd | duration (in days) that the product spans | 181 |
| T | product type, according to the code described in the following table | D |
| F | file type ("P" for product, "M" for metadata) | P |

This table summarizes the various product type and corresponding codes

| Product type | Code |
|-----------------------------|------|
| Lagrangian ice motion | L |
| Backscatter histogram | B |
| Ice age/thickness histogram | T |
| Ice deformation | D |
| Eulerian ice motion | E |
| Area/open water fraction | C |

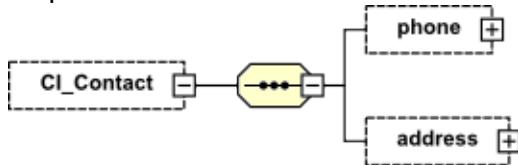

3 ISO XML metadata

The metadata is stored in an ISO metadata compliant XML format.

```
<?xml version="1.0" encoding="utf-8"?>

          </gmd:fileIdentifier>
          <gmd:language>
            <gco:CharacterString>eng</gco:CharacterString>
          </gmd:language>
          <gmd:characterSet>
            <gmd:MD_CharacterSetCode
              codeList="http://www.isotc211.org/2005/resources/Codelist/gmxCodelists.xml#MD_CharacterSetCode" codeListValue="utf8">utf8</gmd:MD_CharacterSetCode>
            </gmd:characterSet>
            <gmd:hierarchyLevel>
              <gmd:MD_ScopeCode
                codeList="http://www.isotc211.org/2005/resources/Codelist/gmxCodelists.xml#MD_ScopeCode" codeListValue="dataset">dataset</gmd:MD_ScopeCode>
              </gmd:hierarchyLevel>
```

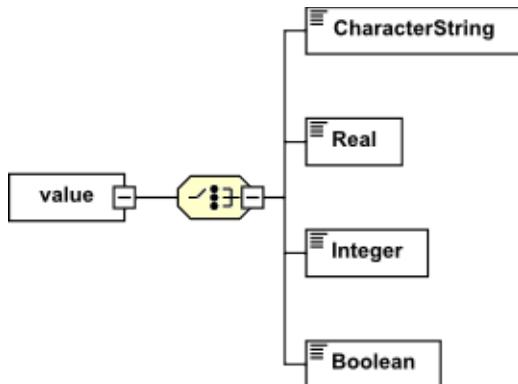

The graphical representation contains a number of compositors and components:

- Sequence

A sequence requires all child elements to be present in the given order, i.e. in this case the **phone** component needs to be in XML file before the **address** component.

- Choice

A choice allows only one of the child elements to be present, i.e. value can be a character string, floating point number, integer number or Boolean.

- Mandatory single element

An element with solid border indicates that the element is required. The absence of a number range implies a minimum and maximum occurrence of the element of 1.

- Single optional element

An element with dashed border indicates that the element is optional. The absence of a number range implies a minimum occurrence of 0 and a maximum occurrence of 1.

- Mandatory single element containing children

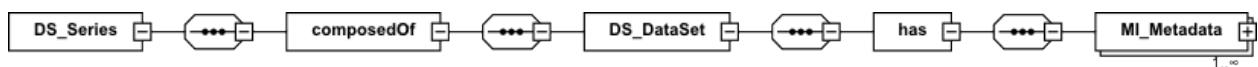

The solid border indicates a mandatory element. The plus sign means complex content, i.e. it contains at least one child element.

- Mandatory multiple element containing child elements

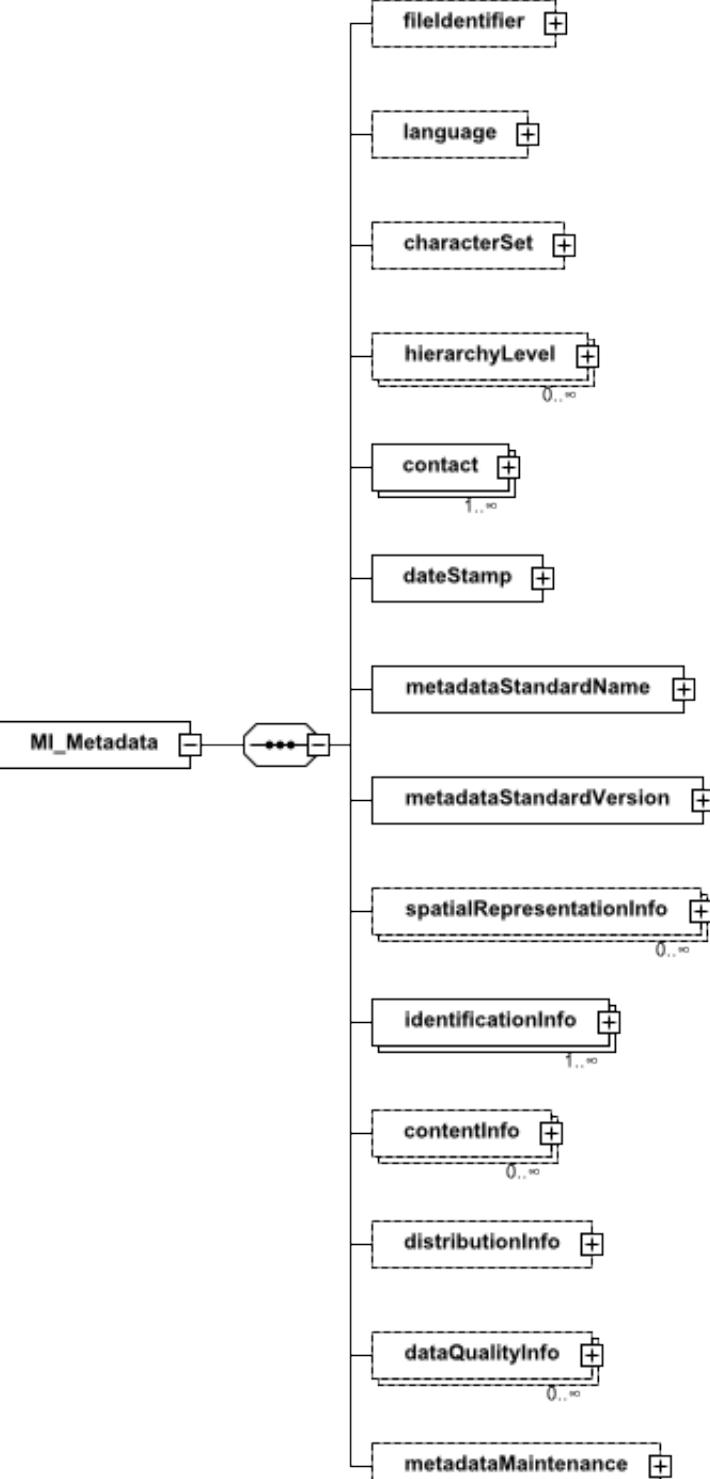

The solid border indicates a mandatory element. The plus sign means complex content, i.e. it contains at least one child element. The number range 1..∞ indicates a minimum occurrence of 1 and an unbounded maximum occurrence.

The structure is outlined in more detail below.

element **MI_Metadata**

| | |
|------------|---|
| diagram |  |
| annotation | documentation contains the metadata for the sea ice product |

3.1 fileIdentifier

element MI_Metadata/fileIdentifier

| | |
